

eco.start™

At **Connection**, we approach the issue of sustainability by designing products based on a 'life cycle assessment' where the product's materials, manufacture, transport, use and disposal are incorporated into the chair's life cycle cost.

THE ANTHROPOMETRICS OF FIT

eco•start™ has been designed to fit the body. All users will be able to adjust to ensure their best fit. No more 'special' chairs, a chair that fits everyone, perfect for flexible working environments where users share workstations.

Study and research into user behaviour and interviewing people while at work has enabled us to develop a clear insight into what people need and want from their chair. The eco•start™ has been designed and developed as a direct result of this understanding. The adjustments, proportions and operation allow users of almost all shapes and sizes to sit comfortably for long periods of time without ill effects – FIRA tests indicate it fits 90-95% of the population.

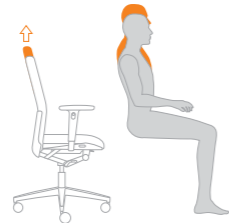

– eco•start™ the right choice for comfort.

1

ARM ADJUSTMENT

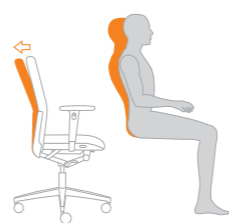

Height adjustment reducing the strain on neck muscles. Width adjustment and pivoting for optimum support angle. Depth adjustment for optimum distance to desk.

2

BACK HEIGHT

Adjustable to the height of the user, providing a range of support for the lumbar spine.

3

BACK TILT

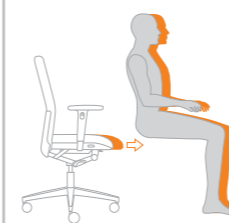

All back options provide support for the back in every position. With adjustable counter pressure the backrest is suitable for both heavy and light users alike.

4

SEAT HEIGHT

Seat height adjustment is essential for a good posture and allows users of all height to find their optimum sitting position.

5

SEAT SLIDE

Adjusts the distance between back rest and front edge of the seat, designed to support upper thighs for taller users.

6

SEAT TILT

The seat has the ability to tilt forwards to prevent the pelvis from tilting back, relieving the spine and avoiding poor posture.

7

WEIGHT TENSION

To increase the synchro weight tension to desired setting, rotate the handle clockwise and anti-clockwise to decrease the tension.

LIFETIME WARRANTY

ENVIRONMENTALLY RESPONSIBLE

eco-start is a task chair designed for the world we live in, providing owners with a peace of mind that it is an environmentally sound investment. To support this investment **eco-start** is covered by a standard five-year structural warranty, however in recognition of its ability to last much longer we offer each chair with an optional Lifetime (10 year) warranty*.

eco-start chair has been analysed to measure its 'carbon footprint', based upon its materials, manufacture, transport and eventual disposal. It was designed using Alpha2Alpha lifecycle. Each stage of product development is examined to assess its environmental impact. By understanding and knowing the extent of this footprint allows **Connection** to offer each chair with a CO₂ offset package, thus making **eco-start** 'carbon neutral'. The price of each chair includes an amount for carbon offsetting. This is managed through our partner Climate Care who fund projects around the world that reduce CO₂, this balances or offsets the original emissions during the chairs manufacture.

See www.climatecare.org.uk for further information.
